

J.A. King Can Handle the Pressure

Pressure is one of the most widely measured variables in process industries, and J.A. King can meet all of your pressure calibration needs. Our experienced technicians utilize state-of-the-art standards to calibrate a comprehensive range of pressure devices including:

- Pressure gages
- Sensors and transmitters
- Manometers and barometers
- Vacuum gages
- Deadweight testers

... and much more!

[Learn more about our pressure capabilities.](#)

We can calibrate pressure devices up to 30,000 psi and low or differential pressure down to 28 inH₂O . Calibrations can be performed in one of our 15 ISO 17025 accredited laboratories or on-site at your facility or job-site. We also offer in-process pressure calibrations services, and our technicians are accustomed to working in a variety of environments.

As a J.A. King calibration customer all of your certificates are available 24/7/365 via our award-winning GageSuite system, and you receive automated recalls to ensure your items don't become past due.

Leave the pressure to the experts, and let J.A. King handle your calibration needs.
