

J.A. King's Kitting Wizard takes the errors out of assembling parts kits - improving time, cost and customer service

J.A. King's engineering department has recently developed our Kitting Wizard, for manual parts kitting processes. The Wizard takes operators through a pre-defined program, which directs them to add specific parts to the kit in a specific order. Pictures and/or text help the operator identify which part to use. Incorrect parts or parts that are under- or over-weight are flagged and program will not continue until error is corrected.

Parts can be added by weight or by number of units, like four screws or three washers. Multiple parts, large parts or very small parts can also be accommodated.

With accurate parts kits, you are not only saving money by putting in exactly what is required (and nothing more) but you are improving your customer service. No customer wants to get a kit and it's missing a critical piece. With a kit that's right every time, the customer can get the job done and your customer service department doesn't get complaints about kits.

CONSISTENTLY BUILD AND VERIFY PRE-ASSEMBLY OR INSTALLATION KITS USING THE KIT WIZARD

J.A. King's Kit Wizard is the most accurate, comprehensive and easy-to-use assembly kit kit. Consistency is fundamentally needed in assembly. In a shop where you are assembling anything from a simple assembly to a complex assembly, the Kit Wizard can help you. It's a simple, easy-to-use, and powerful tool that can help you build and verify your assembly kits. It's a simple, easy-to-use, and powerful tool that can help you build and verify your assembly kits. It's a simple, easy-to-use, and powerful tool that can help you build and verify your assembly kits.
