

Why a custom fixture may be the best solution

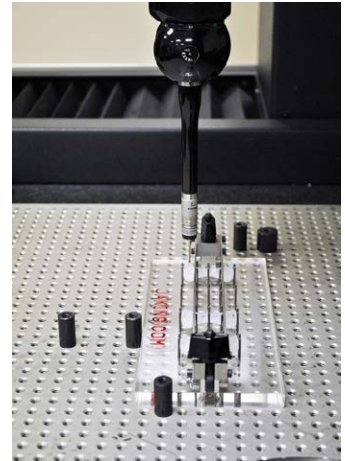

Do you have complex parts that you need multiple measurements from? What about ones that are hard to hold or hard to see? Or maybe you need to do high volume measurements quickly and repeatably? A custom fixture from J.A. King may be the answer to your fixturing fix.

A custom fixture ensures the part you're measuring is held securely and consistently on the fixture the same way every time.

Custom fixtures are ideal for:

- High volume parts inspection
- Parts that are hard to hold, from the simple but awkward to the complex and tricky
- Parts that might not otherwise be seen, either due to their composition or the lighting necessary to highlight features
