

Compact, accurate, cost effective – Wireless temperature and humidity data loggers from Madgetech and J.A. King

FSMA and USDA regulations require temperature records for all parts of the food and beverage production and transportation process. Madgetech’s wireless data loggers monitor and record temperature and humidity easily, accurately and in a cost effective manner. They allow you to see both product and process temperature in real time, even in the most challenging environments.

Applications Include:

- Cooking and cooling
- Food storage
- Food transportation
- Oven temperature monitoring
- Beverage pasteurization

All of the Madgetech data loggers can be networked into free Windows-based software which collects, displays and analyzes the data. The information is stored in a cloud service and can be viewed from any internet-enabled device anywhere in the world 24/7. Email and text notifications when readings fall outside specification can also be enabled.

Madgetech’s range of sensors and transceivers ensure regulatory compliance and process verification, no matter what your product. Contact the measurement experts at J.A. King to discuss the right equipment and configuration for your particular application.
