

Introducing the Ohaus ST 3100M Water Quality Analysis Meter

J.A. King is proud to offer our customers the best in high quality lab equipment. One of our most popular brands, Ohaus, offers a Multi-Parameter Water Analysis Bench Meter which brings power and efficiency to your laboratory with sophisticated measurement capabilities and multi-parameter water quality testing capabilities. From pH to resistivity, and everything in between, the ST3100M tackles your most complex jobs with ease.

You can save time, space and money with the Starter 3100M Bench Meter. It combines all your pH, ORP, conductivity, TDS, salinity, resistivity and temperature measurements - in one smart device.

Ideal for a wide range of lab applications, the ST3100M is incredibly easy to use. Equipped with software to ensure the reliability of your readings, and RS232 connectivity to store and transfer data conveniently, this meter is a great addition to your lab.

Advanced Measurement Capabilities

Sophisticated measurement capabilities and a wide range of calibration options give you the flexibility to perform a wide variety of tests, while results storage for 99 sets of pH or conductivity data and a pH electrode condition icon offer ease-of-use.

Convenient, Simple Operation

A large backlit LCD display allows for easy viewing of measurement results, with a membrane keypad and audible message alerts to take the guesswork out of your lab, while an attached Quick Guide offers easy user reference, at your fingertips.
