Pharma, Vet Medicine, and Supplement Industries require metal detectors to ensure product safety and compliance

As a distributor for Sartorius, we have access to a full range of detector types such as conveyors, gravity applications, pipelines, and foil packed products. Sartorius offers a variety of models to suit every application and price point.

These products are highly accurate with fast-acting rejection mechanisms, to ensure your products remain high quality and contaminant-free. Interested in pricing metal detection equipment with J.A. King? Click on the button below for a quote!

In addition to new equipment sales, J.A. King also now offers metal detector calibration at all of our full service locations. All HACCP-based standards require regular monitoring of metal detector effectiveness. For complete peace of mind, a third party calibration backs up your daily checks and ensures your equipment is functioning properly.

With calibration service from J.A. King, your equipment certificates are stored in [GageSuite](#), our cloud-based calibration management program, for easy retrieval at audit time. So you can rest assured your equipment is functioning properly, and your product is safe.

Interested in metal detector calibration service? Click below to request a quote from J.A. King or check out [metal detection calibration](#) at [jaking.com](#) for more information!
