

J.A. King Has The Leading Technology & Resources You Need To Ensure Your PPAP Requirements Are Met

Automotive suppliers are required to obtain PPAP approval if they are introducing a new or modified part into the production process.

This ensures that the client's requirements are understood, the product meets those requirements, the process is capable of producing a conforming product, and that the product control plan along with the quality management system will prevent non-conforming parts from reaching the client.

PPAP packets can save automotive manufactures time and money when completed correctly. However, failure to correctly and thoroughly complete the PPAP can result in lost time and money through failures and recalls.

J.A. King can help! PPAP completion is time consuming, and requires appropriately trained staff and equipment. We are accredited and experienced in supplying the necessary dimensional verification for the PPAP packet. Our laboratories are equipped with the latest technology for metrological inspection including:

- CMMs and portable CMMs
- Video measurement systems
- Video inspection systems
- Optical Comparators
- Contour measurement equipment

Our staff provide inspections that are highly accurate, very thorough and as efficient as possible, so you get your information back in a timely manner. Let our team help you complete your next PPAP. Click below for a quote today!
