

Dynamometers are used in a variety of energy industry applications including dynamic load monitoring for oil & gas and measuring the tension of utility guy wires. Routine [dynamometer calibration](#) ensures accurate and reliable readings. Calibration is also necessary to meet OSHA safety regulations.

J.A. King is ISO 17025 accredited to calibrate dynamometers using NIST-traceable standards. We calibrate both mechanical and digital dynamometers up to 100,000 lbs. Our team can also perform repair services on dynamometers from a variety of manufacturers. All calibrations are tracked in our [GageSuite](#) system, giving you 24/7/365 access to your data.
