

Food and Beverage Industry: August 2017

## Truck scale automation from J.A. King can help improve efficiency and prevent fraud

In the food and beverage industry, inbound and outbound bulk materials frequently pass over one or more truck scales. A truck scale is your cash register and can also ensure vehicle weight compliance. But did you know that with a few accessories, your truck scale can be so much more, with tangible financial benefits?

It can help you with:

- **Manpower savings:** Automated kiosks allow drivers to sign in and out themselves, reducing the number of hours an attendant is needed
- **Fraud prevention:** Unique barcoded tickets, loop detectors and cameras record exactly what is delivered
- **Communication:** Traffic lights clearly show drivers when to move, with scoreboards displaying gross vehicle weight
- **Efficiency:** Faster throughput and 24/7 processing reduces wait time and smooths traffic flow
