Temperature calibration from J.A. King ensures accuracy you can rely on

Temperature is an important measurement in all facets of consumer product development and production. Whether you are just using it to monitor ambient temperature or it is critical to your process and product, temperature devices need to be regularly calibrated. This ensures they are functioning as intended as they are prone to measurement drift over time.

From temperature transmitters to ovens and dry block calibrators J.A. King's ISO 17025 accredited [temperature calibration services](#) ensure your devices are performing accurately. We offer the convenience of on-site calibration for many temperature devices including ovens, RTDs, and temperature controllers in addition to our in-lab calibration capabilities. All calibrations are tracked in our award-winning GageSuite system for easy access to your calibration documentation.

Whether you have one laboratory oven or 50 temperature transmitters, the experts at J.A. King can meet your temperature calibration needs.
