Motorized Vehicles Industry: October 2017

"It has long been an axiom of mine that the little things are infinitely the most important."

Sherlock Holmes

J.A. King sells the right measuring equipment for you specific application, from hand gages through optical comparators, CMMs and vision machines. Let our metrology detectives solve your measurement needs.

Like the great detective, manufacturing companies know that details are important. The smallest variation in a part can cause big problems. It is imperative that incoming and production parts have every facet precisely measured to ensure their smooth integration into your manufacturing or assembly process.

But sometimes manufacturing companies (unlike great detectives) don't have time to examine every detail and need to use 3rd party inspection services. J.A. King's dimensional metrology laboratory can assist by performing first article inspections, capability studies, PPAP submissions and providing impartial, 3rd party evaluations.

With the widest range of world class equipment to choose from, our dimensional metrologists select the most appropriate measurement tool for the application, from CMMs and video measuring machines to contour machines and surface roughness testers. No matter which method is selected, we precisely measure and analyze your parts to enable you to make the best decision for your process.

So if you don't have the time or the tools to investigate, let J.A. King put on our deerstalker cap and do the inspection for you. We may not be world class detectives, but we are world class measurement professionals and measurement data is our specialty.

"It is a capital mistake to theorize before one has data. Insensibly, one begins to twist facts to suit theories, instead of theories to suit facts." Sherlock Holmes
