

J.A. King's gage sweeps locate & evaluate your tools before an audit

The intense scrutiny that auditors give your calibration system is frequently one of the most feared parts of an external audit.

- Will I have the documentation for everything they find?
- Will all the equipment they find be calibrated?
- What if they find something that I missed?

Even the most experienced quality professionals can get lost in second guessing.

The precision measurement team at J.A. King can help put your mind at ease. We have a variety of tools to make sure your calibration system is audit ready.

Check out our chalk talk video about tool sweeps (right) and take a look at our full literature sheet about audit preparation (below).

TOOL SWEEPS

Gages and measurement equipment are located, calibrated and documented for audit compliance. Comprehensive reports are available. Take a look at our literature sheet on your business.

DATE	TIME	LOCATION	ITEM	STATUS	DATE	DATE	DATE	DATE	DATE	DATE
08/15/18	08:00	1000	1000	OK	08/15/18	08:00	08:00	08:00	08:00	08:00

DO YOU KNOW WHERE ALL YOUR GAGES ARE? ARE THEY CALIBRATED?

The first step in preparing for a successful audit typically involves a tool sweep. During a tool sweep, J.A. King technicians locate every piece of gage and measurement equipment in your facility - from callipers, to sockets, torque wrenches, and more. We then document the location so you can easily find it again. This is your audit trail. Next, we verify every piece of equipment's calibration status. Typically, we then use any tools that are found to be past due to ensure everything is correct for the site.

A tool sweep ensures you have a solid foundation heading into your audit. Other benefits include:

- Locate missing gages that, otherwise, don't need to be replaced.
- No audit findings for asset due gages in use.
- Updating your system to reflect what is on the plant floor.

As the result of your tool sweep, you will be able to see a comprehensive report detailing the number of gages found during the sweep, the number of gages that were not in your system, the number of gages that were not in your system, and those that had never been calibrated. A comparison of what was found in your asset management system versus what was actually on the plant floor, and any further recommendations to avoid audit findings or improve asset management.

GageSuite Tips and Tricks: 2D Barcodes

Did you know that for nearly all parameters our calibration stickers now feature a 2D barcode? You can scan this barcode with your cell phone, tablet, or any device with a 2D scanner to easily pull up the equipment's most recent certificate of calibration. If you don't already have a GageSuite login, click below to learn more and sign up today.
