

Not enough time to inspect all your parts? J.A. King can help

You know J.A. King for our world-class calibration services. But did you know that J.A. King also offers comprehensive dimensional inspection for your parts? Whether they are pre-production parts which need to be validated or incoming parts that you're not 100% certain about, J.A. King can help.

Our dimensional metrologists select the most appropriate measurement tool for the application, from CMMs and Video Measuring machines to Contour machines and Surface Roughness testers. They compare the data with the measurements on your drawing and report back.

Whether you have one part or thousands, J.A. King can provide impartial, comprehensive measurements in a timely manner. So if you don't have the time or the tools to perform the inspection, click below to get J.A. King's help with your parts.

J.A. King's product and environmental testing services

At all points of the development and production process, consumer goods are required to go through rigorous testing protocols to ensure conformance to specification and safety guidelines. J.A. King's 17025 testing lab can offer a variety of accredited and non-accredited to meet your testing needs, including:

- Accelerated Aging
- Climatic Stressing
- UV & Sun Simulation
- Dimensional Testing
- Conductivity
- Impact & Drop Testing
- Viscosity/Porosity Testing
- Tensile/Compression Testing
- Thickness Testing
- Flammability Testing
- Salt Fog Testing (NaCl/Cass)
- Moisture Saturation Testing
- Packaging Testing
- Reliability/Durability Testing

We know that every test specification is unique, as is every product tested. Our test engineers work with you to design a test plan that fulfills all your requirements in the most efficient way possible. This can include the custom-designed test rigs and components, if necessary.

You know that J.A. King are the experts in all types of measurement. Why not trust your testing to the company who provides you world-class measurement services? Click here to schedule a discussion with J.A. King's testing engineers.

Looking ahead to inventory this fall? Counting scales can make counting parts painless

It's coming up to the time of year that everyone dreads: inventory. Long days, paperwork nightmares, lots of small parts to count. Did you know that counting scales from J.A. King can help with getting an efficient and accurate count of your parts, large or small?

Counting scales are highly accurate scales which give you the ability to measure a large quantity of identical parts down to the single piece. They are designed for industrial environments with durable housings and substantial overload protection. Counting scales can also be paired with scanners, printers or connected directly to ERP systems for increased efficiency. [Learn more about J.A. King's range of counting scales.](#)

p.s. not sure you're ready to invest in a new scale? We also rent counting scales for inventory, but make sure you get in touch soon, as quantities are limited. Click below to find out about scale rental.

GageSuite Tips an Tricks: 2D Barcodes

Did you know that for nearly all parameters our calibration stickers now feature a 2D barcode? You can scan this barcode with your cell phone, tablet, or any device with a 2D scanner to easily pull up the equipment's most recent certificate of calibration. If you don't already have a GageSuite login, click below to learn more and sign up today.
